

Determining the nature of Frankenstein is beyond our control

Yoshiyasu Takefuji

Henk van den Belt wrote an article entitled "Frankenstein lives on" (1). Scientists do not know all possible applications of his/her inventions. Besides, nobody can stop the advancement of science. Nature of Frankenstein is determined not by scientists but by the users of the invented technology. We know that the nature of human (users) is determined by ethics and/or moral. A new discovery or technology is based on scientific building blocks where each block refers to past discoveries or legacy technologies. Based on deductive reasoning, if we cannot manage someone's ethics or moral, then determining the nature of Frankenstein is beyond our control.
